

Tiny USB Office

Tiny USB Office, which replaces the former FloppyOffice package, is an improved version of the small, portable productivity software suite which offers a collection of unique standalone free software applications. If you find yourself working on different machines and like the idea of having portable software that you can access hassle-free from any computer, then this is the package for you. Whether you need to create rich-text word processing documents, share files across multiple computers, transfer files, create MS Excel compatible spreadsheets, comma-delimited database files, email your contacts, talk to your friends or co-workers on MSN, create pdf files, or securely encrypt or delete files - this is the perfect software package for you! When it comes to portable productivity, Tiny USB Office offers you the biggest bang for your buck - all under 2.5 megabytes of space! Hope you find it useful.

Some of Tiny USB Office productivity features

all of these programs are accessible with one click with an included Qsel portable program launcher software:

Database Creation - with CSVed
Data Encryption - with DScrypt
Email Client Software - with NPopUK
File Compression - with 100 Zipper
File Sharing - with HFS
File Transfer - with FTP Wanderer
Flowchart Creation - with EVE Vector Editor
MSN Messenger Client - with PixaMSN
Tree-Style Outliner Software - with Mempad
PDF Creation - with PDF Producer
Password Recovery - with XPass
Secure Deletion - with DSdel
Spreadsheet Creation - with Spread32
Text Editing - with TedNotepad
Word Processing - with Kpad
Program Launching - with Qsel

Tiny USB Office can do all this and more at under 2.5 megabytes!

About the applications, for more specific data, refer to the readme files in each application's zip file:

- CSVed - a CSV file editor that can export to HTML, Excel, Word, XML and more.
- PixaMSN - a standalone MSN Chat Client.
- HFS - a HTTP File Server to send and receive files.
- KPad - a simple MDI Rich Text editor. (replaces Wordpad)
- NPopUK - a complete POP3 email client. (almost replaces Outlook Express)
- Ted - an unbelievably full featured notepad replacement which supports unicode.(completely replaces notepad, and then some)
- EVE - a vector editor graphics program which can serve as a flow chart tool (replaces MS Paint, even though Paint is a bitmap editor...)
- FTP Wanderer - a simple FTP client (replaces WSFTP)
- 110k Zipper - a small zip/unzip utility (almost replaces Winzip)
- PDF Producer - a simple text-PDF conversion application (almost replaces PDF printer driver)
- Spread32 - a fully MS Excel compatible full-featured spreadsheet program. Version 19991112 Beta is the last free one!. (almost replaces MS Excel)
- MemPad - keeps little tree sytle notes with a handy index. (handy rudimentary outliner)
- dsCrypt - an AES/Rijndael file encryption software.
- X-Pass - X-Pass reveals all system password fields.
- dsDEL - dsDEL is a secure file deletion utility.

FAQ

Q: How do I setup the “Qsel” application launcher to run these programs from my flash drive?

A: All of these applications come in their own folder, choose the ones you want and follow the directions in the “Qsel_ReadMe.txt” file. If you only need or want certain applications in this package, just delete the folders of the application you don't want.

Q: How do I use any particular application?

A: Just refer to the “readme” files included in that program's folder.

All of the applications are freeware, however each of them have their own individual licenses, and belong to their respective authors. If you have any support queries or need more detailed information, please refer to the individual “readme” files in each application's directory. If you like these applications - please do not hesitate to offer support, donation, etc to the respective authors of these programs, who have offered them, unselfishly as free software. There is no way that a company like MS, for example, could offer applications like these at any price.
